

UNIVERSITY ADMIT ELIGIBILITY PREDICTOR

PROJECT OBJECTIVE

Date	10 November 2022
Team ID	PNT2022TMID53372
Project Name	University Admit Eligibility Prediction System

Objective:

- University admission predictor is a blessing to many students. This Project helps the student not only to help in filling out the admission forms but also give the students an idea about their higher education by calculating their cut off.
- When students come from rural places, they might feel it hard to go along with the formal procedures. So, this application helps them to come out from fears of getting admission in colleges.
- Whatever may be their marks, this application helps to find the good colleges. Hence, the proposed computer aided system will help the students to get the list of all colleges in which they could get the admission at the click of a button.
- The students only have to enter their marks of GRE, TOFFEL, UNIVERSITY RANK, etc. With this application, the students can very easily obtain the list of colleges even branch wise and course wise. This will not only make the admission process easy but also minimizes stress for students. The main objective of our system is to make the right and available choice of colleges.
